Application for Assistant Technical Project Manager

Dear Hiring Manager,

I am applying for an Assistant Technical Project Manager position. My background combines hands-on web engineering with team leadership, client communication and Agile project delivery. I bring 10+ years in web development and 7+ years in digital marketing, supported by experience with Jira, Zoho Sprints, HubSpot and performance reporting.

At Rath Infotech, I coordinate client web projects from requirements and scope planning through development, quality assurance and launch. I work with frontend and backend developers, marketing teams and QA testers to manage priorities, track milestones and communicate progress. My technical background helps me identify delivery risks, resolve roadblocks and review website quality before release.

In previous team leadership roles at Velocity Media Lab, Epicenter Technologies and Futran Tech Solutions, I coordinated tasks and release activities, maintained client communication and supported website performance and analytics. I also developed Power BI dashboards using GA4 and Google Search Console data to improve stakeholder visibility.

I would welcome the opportunity to support your project manager and technical teams with structured planning, clear status reporting, practical problem solving and consistent follow-through. I am based in Mumbai and open to remote work and relocation.

Thank you for considering my application. I would be glad to discuss how my technical delivery and team leadership experience can contribute to your projects.

Sincerely,

Aditya Shashikant Kadam
